

REFERENCE LIST

iQ-SYSTEM PACS INSTALLATIONS
AROUND THE WORLD

JUST AROUND THE CORNER

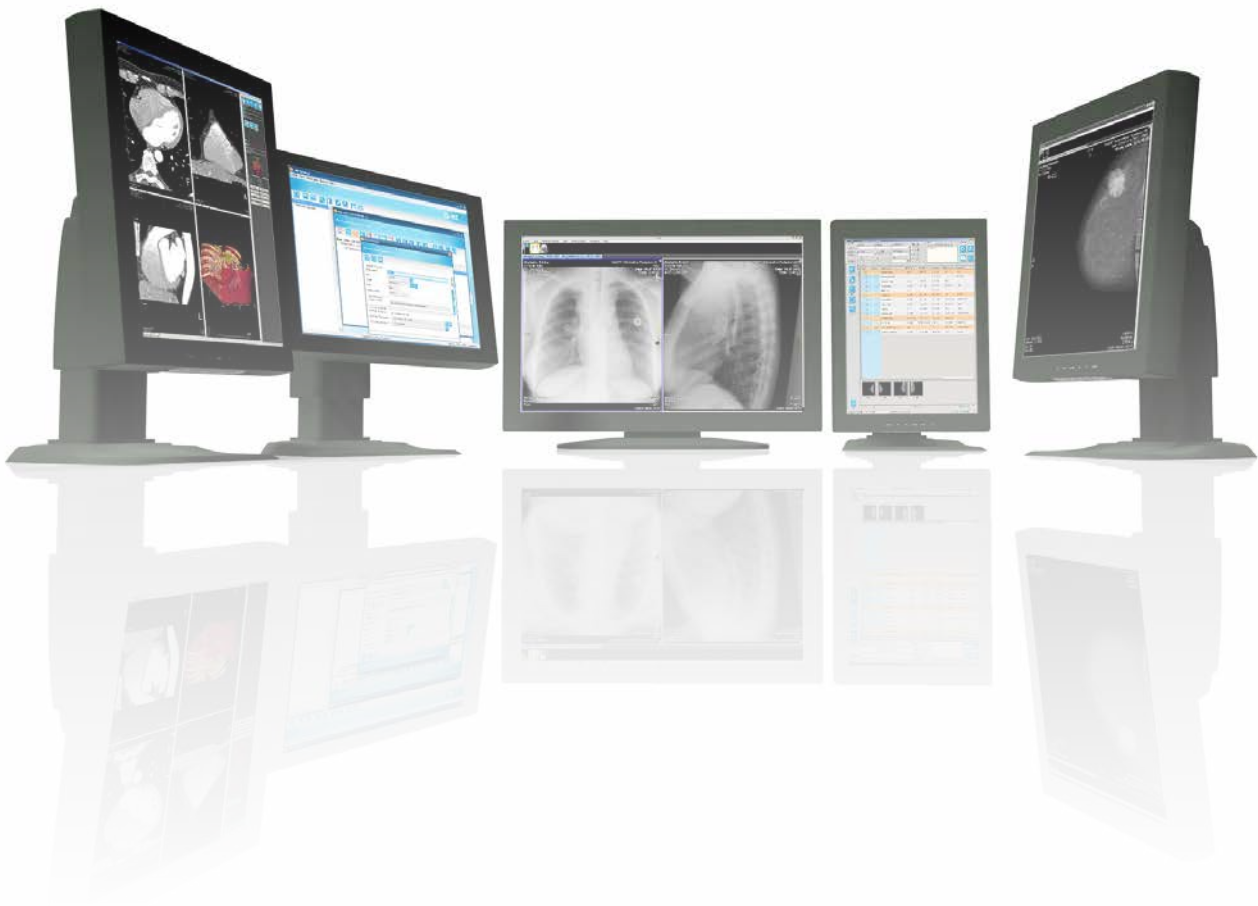

GLOBAL REFERENCE LIST

IMAGE Information Systems is a global player in the field of medical imaging. We provide innovative, complete, reliable and cost-effective solutions for small, medium and large institutions.

We have pioneered several innovations to the market: We are the first worldwide PACS vendor to introduce true 12 bit grayscale display technology for a visibly better quality of CR, DR and CT studies. We are the world's first provider of a fully automatic nuclear heart reconstruction. Our DICOMReader has the highest available read-in rate of patient CD-ROMs ensuring virtually full compatibility with almost all available imaging modalities and vendors.

Our flagships, iQ-SYSTEM PACS and iQ-RIS, are improving the quality and workflow of medical professionals all over the world. Here is just a selection of successful installations around the globe - additional references by region or specialization are available upon request.

** According to Mr. David Delp, Lifeline's IT Director, iQ-VIEW is the viewer of choice in most of Lifeline's access centers: "Our partnering nephrologists and interventionalists are performing procedures which necessitate doing studies on the dialysis access sites for hemodialysis patients. We are utilizing both Philips and GE C-Arms as well as SonoSite ultrasound machines. We are running DICOM servers to store and manage images and we are using iQ-VIEW to view them. We currently have about 60 facilities around the country and have iQ-VIEW installed in all but a few of them, as the viewer that our partnering physicians utilize."

** Elaine Halesy, Ed.D., R.T.R. R (QM) (ARRT: "Thanks so much for this terrific product. The addition of our ability to utilize this PACS system has positively enhanced the curriculum at Misericordia University in many ways. It allows our students to see, first hand, on campus, prior to them actually experiencing the clinical portion of the program, the type of product used in actual Radiology Departments. It also will improve our ability to deliver the curriculum in a more efficient manner."

** "DIAGNOS-Online reports radiology studies coming from five different countries in the world Our reporting radiologists are distributed all over Argentina, so this huge workflow must be organized in an efficient and secure way. We found iQ-SYSTEM PACS to be the best solution for our actual needs considering security, efficiency and cost relation. We also found other iQ solutions like iQ-ROUTER very useful to improve image transfer in countries with low-speed telecommunication networks, and iQ-CAPTURE to "dicomize" analog images. This way, we increased the number of potential clients, giving everyone the chance to participate in our teleradiology network!"

** One of the public corporation's tasks is the radiation protection of clinical radiology departments. There are about 500 X-Ray tubes which have to be controlled regularly. Therefore, it is necessary to evaluate X-Ray pictures from several sources. Mr. Matthias Beyer, head of the association's IT department, is convinced that "iQ-VIEW and the DICOMReader are excellent instruments to use in this controlling process." He further confirms that they received any kind of advisory service necessary for implementing and using iQ-VIEW. He also states that the new image system is an advantage for everyday work in quality management – they do not want to miss it anymore.

iQ-VIEW PRO

** "As the Italian non-profit organization Charity Emergency was furnishing a cardiac hospital in Sudan, they decided to also equip the institution with a modern CT scanner. The question that arose was in which way the data provided by this modality was going to be processed. The alternatives were either to purchase a printer and perform diagnostics the old-fashioned way, thus causing additional permanent costs for maintenance and consumables, or rather to move forward and acquire a mini-PACS, by which they could benefit from the advantages of a digital workflow while saving money. After evaluating several systems, they finally decided to purchase iQ-VIEW, due to its convenience and many easy-to-use tools for measurements, communication and diagnosis.

OUR COMPANY AT A GLANCE

IMAGE Information Systems is an international company group with offices in the USA, Germany and the UK, which offers complete, user friendly and cost-effective medical imaging solutions.

Thousands of satisfied clients all over the world benefit from our state-of-the-art products for PACS, RIS, nuclear medicine, medical displays, X-Ray solutions, 3D processing and teleradiology.

We have pioneered several innovations in the market:

- We have introduced MED-TAB, the first DICOM-calibrated medical tablet worldwide to provide superior portable image analysis
- Our iQ-ROUTER supports virtually all DICOM image formats and transfer syntaxes in data transmission
- DICOMReader has the highest available read-in rate of patient CD-ROMs, ensuring compatibility with almost all available imaging modalities and vendors

IMAGE Information Systems provides the second largest digital imaging user forum on earth, enabling users to share knowledge and best practice.
